

## WINDEAL - Additional API & Business Requirements

### 1. Featured Deals & Nearby Deals

Featured Deals and Nearby Deals should be treated as separate fixed sections.

Featured Deals:

- Deals should be fetched ordered by Rating (highest first).
- Alternatively, the backend may support a dedicated filter:  
is\_featured=true

Nearby Deals:

- The mobile application sends the user's Latitude and Longitude.
- The backend calculates the distance between the user and available deals.
- Deals are returned sorted by nearest distance first.

### 2. Payment History

A payment history module should be implemented.

Suggested Fields:

- id (UUID)
- transaction\_date (ISO 8601)
- amount (Double)
- payment\_method (String)
- subscription\_plan (String)
- reference\_number (String)
- status (Pending | Approved | Rejected)

Suggested Endpoint:

GET /subscription/payment-history/

Purpose:

Allows users to view all previous subscription payments and their verification status.
